

AFTER GRADE 8, WHAT?

As a child makes the transition from Grade 8 to Grade 9, the question uppermost on a parent's mind is 'what next'? Concern for the wellbeing of children prompts many parents to drive them to school by car. However, increased driving creates safety, environmental and health hazards:

- Dangerous traffic congestion around schools when children are using the streets
- Unhealthy automobile emissions which contribute to the deterioration of air quality and climate change
- Automobile dependent children

CAN SECURITY AND FREEDOM GO HAND IN HAND?

Definitely. And what better way than YRT or Viva to help them experience freedom without compromising their security. By taking YRT or Viva to school, they will now open up the world around them and gain confidence. They will get a taste of freedom and responsibility and the opportunity to get to know their neighbourhood, community and each other. While arriving at school alert, refreshed and ready to start their day. Of course, this also makes the school journey safer, healthier and more environmentally responsible. More people riding YRT or Viva means fewer cars on the road which translates to less air pollution, fewer traffic snarls and safer roads for everyone.

MORE ROUTES. MORE FREQUENT. MORE CONVENIENT.

Combined, YRT and Viva cover more routes with increased frequency. Plus, we are constantly upgrading our services at every level. For instance, at our user-friendly Viva stations, screens display when the next bus is coming. You can relax, knowing the trip will be on time and efficient. Riding YRT and Viva offers a combination of freedom, independence and convenience.

Go on, help your child make the transition without sacrificing safety or your peace of mind.
